

Overview

Below are the Table of Contents and a sample table from the *World Boxboard Capacity Report*.

This report includes current, planned and assumed capacity by mill for the global boxboard industry and includes cartonboard and other paperboard. Worldwide capacity and market share of the top 20 producers are ranked by grade according to capacity and market share. Mill-by-mill annual data are sorted by country/region.

The data for each mill or country are presented in thousand tonnes of annual capacity and are based on published information as well as our own estimates.

In many parts of the world, boxboard is produced on small machines that also produce large numbers of other grades. This capacity is quite often listed under the broadest definition. In order to balance the boxboard capacity estimates, we have set up a residual factor for regions such as Africa, Latin America and the Middle East. This residual category captures shifts in tonnage between the various packaging categories, which are often not reported for a number of years.
