

Overview

Below are the List of Tables and a sample table from the *World Containerboard Capacity Report*.

This report includes current, planned and assumed capacity by mill for the global containerboard industry from 1999 to 2011. Capacities are listed by country, by mill and by grade. Capacity estimates are presented for mills that have claimed production of any of the containerboard grades: kraftliner, recycled (including nonwood) liner, semichemical corrugating medium and recycled (including nonwood) corrugating medium. In many cases, the production of recycled linerboard and medium are combined into a broader recycled containerboard category.

The data for each mill or country is presented in thousand tonnes of annual capacity and is based on published information as well as our own estimates.

In many parts of the world, containerboard is produced on small machines that also produce large numbers of other grades. This capacity is quite often listed under the broadest definition of packaging papers. In order to balance the containerboard and packaging capacity estimates for regions such as Latin America, Africa and the Middle East, we have included machines that produce most of the other packaging grades in this capacity report. This capacity report also lists a number of mills with no reported containerboard capacity between 1999 and 2011. These mills were included because they did produce measurable amounts of containerboard at some point during the last 10 years.
